1. "Occupancy rate" is a calculation based on the number of beds staffed that were occupied during the reporting period. Also referred to as percentage occupancy. (Total days of care multiplied by 100) divided by (beds staffed multiplied by 365 or 366 for leap year).
2. "Beds staffed and in operation" refers to the number of beds that are either occupied or available for new resident admissions on the last day of the reference period.
3. Principal characteristic of predominant group of residents and size of facility.
4. To comply with the confidentiality requirements of the Statistics Act, some data for the Territories were combined. Data from homes for the aged with 50 beds or more were combined with those having 20 to 49 beds. Data from facilities with 20 beds or more, for persons with mental disorders, were included with facilities that had 1 to 19 beds. Data for the category "Other" were also included with facilities for persons with mental disorders, 1 to 19 beds.
