1. Age, in the case of infant deaths, corresponds to the completed number of months (or minutes, hours, or days) since birth.
2. Mortality rate calculations in this table use live births in the calendar year instead of the Demography Division's under one year of age population estimate (Appendix 1).
3. The mortality rate represents the number of deaths in a particular age group during a given year per 1,000 live births in the same calendar year.
4. Infant death rate is the number of infant deaths during a given year per 1,000 live births in the same year.
5. Neonatal mortality rate is the number of neonatal deaths during a given year per 1,000 live births in the same year.
6. Post-neonatal mortality rate is the number of post-neonatal deaths during a given year per 1,000 live births in the same year.
